

BATTERY TECH EXPO

International Centre,
Telford, UK.
15th March 2018

POWER ELECTRONICS EXPO

Stand F7-F8

Discover the world's first hybrid battery and demand side solution from ESB & GridBeyond. Learn how we enable previously untapped assets to earn significant revenues on stand F7-F8.

11:40am, Main Theatre

Michael Phelan, CEO GridBeyond, presents a case study of the world's first approved hybrid battery & demand side network in operation in a large manufacturer, transforming energy into opportunity.

WELCOME TO: The Battery Tech & Power Electronics Expo 2018

David Reeks
Managing
Director,
10four Media
Ltd.

Turn to page 12 to find the expo floor plan and full list of exhibitors.

Events Team:

Rebekah Ford

Helen Peden

The battery and power electronics markets are on the cusp of a revolution with the industry investing heavily in the next generation of development.

Today you'll have the chance to experience the latest technological developments across the battery technology, energy storage and power electronics sectors. In the main exhibition hall, you'll find leading exhibitors from across the UK and Europe showcasing the very latest innovations. During the day, industry experts will be presenting a variety of topics on the centre stage.

PLATINUM SPONSORS:

GOLD SPONSORS:

The Battery Tech & Power Electronics Expo 2018

SPEAKER AGENDA

10:00 – 10:20
Innovate UK

Speaker: Dr Anna Wise – Innovation Lead – Batteries, Innovate UK
Subject: The Faraday Battery Challenge: Accelerating the UK battery industry

Anna joined the Automotive team of Innovate UK in June 2017. Her focus is delivering the innovation programmes in battery technology for electric vehicles, in particular the innovation aspect of the £246 million Faraday Battery Challenge. Before joining Innovate UK, she was based in the USA at Stanford University and SLAC National Accelerator Laboratory. There she carried out collaborative research with business and academia to understand battery behaviour using high intensity X-rays. Anna was awarded a Ph.D. in Chemistry from the University of Southampton in 2012.

10:20 – 10:40
Steatite

Speaker: Khalid Khan – Business Development Director, Steatite
Subject: The use and development of lithium batteries in emerging markets

Khalid has extensive experience within the battery industry, an area in which he has worked for the last 9 years, covering a range of battery chemistries. Khalid is currently focused on the introduction and development of battery technologies into harsh and critical environments.

10:40 – 11:00
Advanced Propulsion Centre

Speaker: Garry Wilson – Director of Business Development, Advanced Propulsion Centre

Garry Wilson has more than 30 years experience in the automotive industry working for vehicle manufacturers and suppliers. He held various leadership roles within BMW, Land Rover, MG and Rover including Chief Engineer for Powertrain Manufacturing Engineering. He has worked for Roush and Delphi and most recently as a Board member at Torotrak and has experience in all aspects of the motor industry and business functions with predominant experience in powertrain engineering and manufacturing.

At the APC, Garry's key focus is Business Development which includes development of the Hub and Spoke network which will bring together the key technical, regional and specialist skills across the UK.

11:00 – 11:20
Laser 2000

Speaker: Peter Collins – Field Sales Team Leader, Laser 2000
Subject: Into the Blue – laser welding of batteries

Peter Collins is the field sales team leader for the Industrial team at Laser 2000 UK, a specialist photonics distributor; working closely with customers finding photonic solutions that help solve their requirements and problems. He received a BEng(Hons) in Integrated Engineering with Management and an MSc (Eng) in Advanced Engineering with Laser both at the University of Liverpool. Peter has been active in the area of photonics for 12 years, working in laser R&D and laser materials processing applications, before moving into a sales position at Laser 2000. At Battery Tech Expo he will introduce a ground-breaking new high-power blue laser which opens up entirely new ranges of applications, such as welding copper foils for Li:ion batteries.

11:20 – 11:40
Intertek

Speaker: Thomas Carl – Laboratory Manager, Intertek
Subject: EV Battery Safety – testing, regulations and standards

After graduating from the University of applied science of Kempten for Machine Building in 1999, Mr. Carl worked for 13 years as a construction development engineer for different industrial sectors, including machine tools, packaging and the tabasco industry. In 2012, he changed from development of construction to testing services and started at Intertek as test engineer for Li-Ion Batteries (mainly Electrical Vehicle Batteries). In this function, he helped build the Intertek Centre of Excellence for Battery Testing in Germany. From 2015 on, Mr. Carl took over the position and responsibilities as Laboratory Manager. In this role, he expanded the Laboratory to become one of the leading test centers in Germany for Battery, EV Charger and Environmental Testing, as well for the service of Global Market Access (GMAP). Intertek is a well-respected supplier by automotive OEM's, TIER 1's and manufacturers around the world.

11:40 – 12:00
GridBeyond, formerly Endeco Technologies

Speaker: Michael Phelan – CEO, GridBeyond, formerly Endeco Technologies
Subject: Energy security, unlocked grid revenues with low financial risk from the world's first hybrid battery demand-side solution

Michael is a pioneer for demand side response, CEO and co-founder at Endeco Technologies. Michael has over 22 years management experience in sales, marketing and product development in electronic and software companies targeting the energy sector. Prior to joining Endeco Technologies, Michael held positions at Philips, Microsol, PCAS and Duolog in automation and electronics. He was responsible for developing European, Asian and American markets and OEMs such as Invensys, Mitsubishi, Toshiba, and Alstom. In addition, he has facilitated several successful exits. Michael is a graduate of University College Dublin where he obtained an MBA in Business Administration, Management and Operations.

**12:00 – 12:20
Catapult**

Speaker: Dr Alastair McGibbon – Head of Business Development, Catapult

Subject: SiC and GaN power electronics applications: The role of the CSA Catapult

Alastair has over 30 years' experience in the semiconductor industry in industry and academia. Most recently, he has supported the UK Power electronics community through Power Electronics UK. As Business Development Manager for the Compound Semiconductor Application (CSA) Catapult, his focus is working with the UK power electronics supply chain to help them grow through the deployment of GaN and SiC devices in fully integrated, reliable and cost-effective commercial systems.

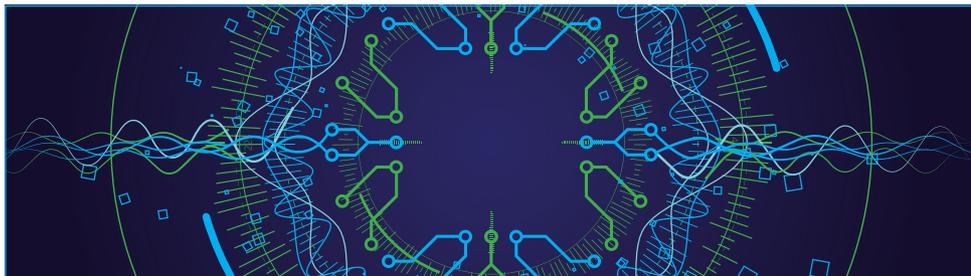

**12:20 – 12:40
The University of Sheffield**

Speaker: Dr Dan Gladwin – Deputy Director of CREESA, The University of Sheffield

Subject: Batteries: Grid connected energy storage and applications

Dr Dan Gladwin (PI) is a Senior Lecturer in the Department of Electrical and Electronic Engineering, within the University of Sheffield. He has particular expertise in energy storage and management, power electronics, and intelligent systems. He is a founding member and Deputy Director of the Centre for Research into Electrical Energy Storage and Applications (CREESA) at the University of Sheffield, and is a named investigator on more than £8.5M of funding from EPSRC, H2020 and Innovate UK in the last 5 years. He manages the work on electrochemical energy storage for grid scale storage and is co-investigator for the £3.8M 1MWh / 2MW lithium titanate facility at Willenhall. He is also co-investigator on the recently started £1.5M TransEnergy project (EP/N022289/1) that is investigating the feasibility of storage on different types of railway networks and in particular the integration of parked electric vehicles close to lines. He has published over 50 papers in the areas of battery modelling and state estimation, optimisation, energy storage and power systems. He is also currently leading a H2020 project to install Europe's largest hybrid flywheel battery energy storage system.

**13:10 – 13:30
Rockfort Engineering, Mahindra Formula E**

Speaker: Angus Lyon – Head of Powertrain Mahindra Formula E – Director of Rockfort Engineering

Subject: Electric Racing: Pushing batteries to the limits

Angus has 22 years' experience within the automotive and motorsport industries. Working for OEMs, Tier 1 and R&D start-ups as well top level F1 and electric racing teams, Angus gained a strong capability in all areas of active systems from suspension to engine and transmissions as well as extensive expertise in EV/HEV technologies. Over the last 10 years Angus has developed EV motors and systems including the car currently holding the world electric land speed record. In 2013, Angus started Rockfort Engineering Ltd, a systems and safety consultancy specialising in development and application of EV/HEV technologies and systems.

**13:30 – 13:50
AVL**

Speaker: Nikolas Sariyannis, Development Engineer, AVL, Germany

Subject: Enhancing mileage and lifetime BMS

After completing his German-French double diploma in Mechanical Engineering at Karlsruhe and Paris, Nikolas joined AVL in 2017. Developing modern automotive battery cells, he gained wide-ranging insights into the challenges of the battery cell development process from an OEM perspective. Lately Nikolas is directing his efforts towards developing innovative battery management strategies to further enhance the systems efficiency at no additional cost.

**13:30 – 13:50
AVL**

Speaker: Mike Parsons – Business Manager Electrification, AVL

Subject: Solutions for validation testing of battery cells, modules & packs

Mike joined AVL UK in January 2017 as Business Manager for Electrification – providing turn-key systems to improve the efficiency of testing batteries (cell/module/pack), charging systems, e-motors, inverters, fuel cells, e-axles and complete electrified powertrains.

Previously, after studying Electronic Engineering at the University of Southampton, Mike spent over 20 years in research and development of hybrid-electric vehicle powertrains for high-mobility off-road vehicles.

Speaker: Dr Gary Mepsted – Technical Manager – Advanced Batteries, Qinetiq

Subject: Advanced lithium-ion cells for next generation battery packs

Gary holds a degree and PhD in chemistry from University of London and he is a Fellow of the Royal Society of Chemistry. He has been working in the field of batteries and fuel cells for more than 20 years and currently leads QinetiQ's advanced power team, which focuses on development and evaluation of batteries and supercapacitors for demanding environments, and fuel cell technologies. Examples include development of very high energy primary lithium cells and a thin, flexible Li-ion cell as well as a portable hydrogen generator and a reformer technology that operates from diesel and other fuels. Gary's team operates a small production facility for manufacture of lithium based cells and a test facility for evaluation and certification. Gary is author of more than 35 papers and 6 patents.

13:50 – 14:10
Qinetiq

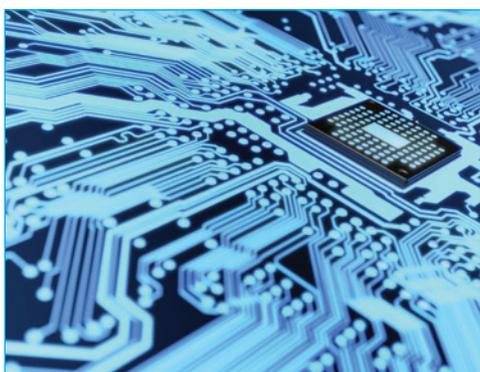

Speaker: Greg Harris – Head of Commercial – Strategic Projects & New Technologies, HORIBA MIRA

Subject: Development of the hybrid powertrain and traction battery for the next generation of Hybrid Refuse Vehicles

HORIBA MIRA has recently developed the series hybrid powertrain and high voltage lithium ion battery for the next generation of efficient, lightweight Dennis Eagle vehicles within the UVR (Urban Vehicle Range) programme. This presentation will cover key aspects of the powertrain control and battery development programme including requirements definition, concept development, controls software, battery design, design validation planning and functional safety.

14:10 – 14:30
HORIBA MIRA

Speaker: Helen Johnstone – European Patent Attorney – Chartered Patent Attorney, Potter Clarkson

Subject: Business after Brexit – opportunities and threats

As a Patent Attorney Litigator and Partner at top-tier, full service European patent and trade mark attorneys and IP lawyers firm Potter Clarkson, Helen regularly advises clients on IP strategy issues such as global filing strategies, and has been involved in due diligence exercises, representing clients at hearings before the European Patent Office. Helen's work has also seen her involved in litigation before the UK Intellectual Property Office and the Patents County Court.

14:30 – 14:50
Potter Clarkson

Specialising in the mechanical, electro-optical and electro-mechanical areas, as well as medical devices, Helen also has experience in the field of battery energy storage. Helen also has extensive experience in the design field, dealing with all aspects of design protection, both registered and unregistered. Helen's shares her extensive experience through working with academic institutions and associated technology transfer departments.

Speaker: Ben Lincoln, European Patent Attorney, Chartered Patent Attorney, Potter Clarkson

As a Patent Attorney Partner at top-tier, full service European patent and trade mark attorneys and IP lawyers firm Potter Clarkson, Ben works with a range of clients from SMEs to large multinational companies. With a background in physics and computer science, Ben's expertise lies in the fields of semiconductors, hybrid power delivery, telecommunications, green technology, plastics engineering, control systems for manufacturing and automotive components. Ben has helped many firms, large and small, with the drafting of patent applications, the prosecution of patent applications around the world and the development of patent strategies. Ben also regularly represents clients at hearings before the UK and European Patent Offices.

14:30 – 14:50
Potter Clarkson

As sector lead for Potter Clarkson's energy sector group, Ben helps coordinate a team of talented patent attorneys each with different experiences in battery industry related technologies. The energy sector team members work together to best serve the needs of our clients.

14:50 – 15:10
Tektronix

Speaker: Omer Sheikh – Applications Specialist, Tektronix
Subject: Challenges of High-Sided FET Measurements and avoiding CMRR Issues

Omer is an Applications Specialist for Tektronix, focusing in the Power Electronics field. With over 8 years of experience in the test and measurement industry, he provides comprehensive technical advice in the selection, use, and application of Oscilloscopes and Probes to customers in a wide variety of Power related applications. He has a BEng degree in Electronics and in his free time enjoys participating in cricket and online gaming.

Floating differential measurements (such as high-side Vgs) are difficult or impossible to make due to high frequency (fast turn on and turn offs), and the presence of high common mode voltages (such as Vds) affecting oscilloscope probes which do not have sufficient common mode rejection at high bandwidth. The poor common mode rejection leads to the measurement being dominated by the common mode error instead of the actual differential signal. This presentation will look at the utilisation of Galvanically Isolated Differential Probes which do not de-rate with frequency at the operating requirements of GaN and SiC devices to allow accurate differential measurements to take place.

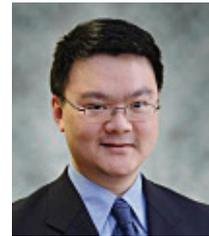

15:10 – 15:30
WMG, University of Warwick

Speaker: Mark Ellis – Principal Engineering – Battery Systems, WMG, University of Warwick
Subject: Enhancing battery performance – a manufacturing challenge

Mark Ellis is Principal Engineer, Battery Systems for WMG at University of Warwick. Mark has over 20 years' experience in the automotive industry in OEM and Tier 1 supplier product development management roles. He has been working on vehicle electrification projects with a focus on electrical energy storage systems for last seven years. Most recently, Mark held the role of Engineering Manager at Johnson Matthey Battery Systems, working on advanced Li-ion battery systems development for Micro-hybrid, HEV, PHEV & BEV platforms.

He is presently working on projects relating to Li-ion module and battery pack manufacturing, and enhancing battery module power and energy density through improved design. His research interests include joining technologies for high conductivity materials, cell thermal characterisation, thermal management and design for manufacture & reuse. Mark is a Chartered Engineer and holds a BEng in Materials Science from University of Birmingham, MSc in Engineering and Business Management (Warwick) and an MBA (Aston).

15:30 – 15:50
Strategy Analytics

Speaker: Kevin Mak – Senior Analyst – Global Automotive Practice, Strategy Analytics
Subject: The future battery market for electric vehicles

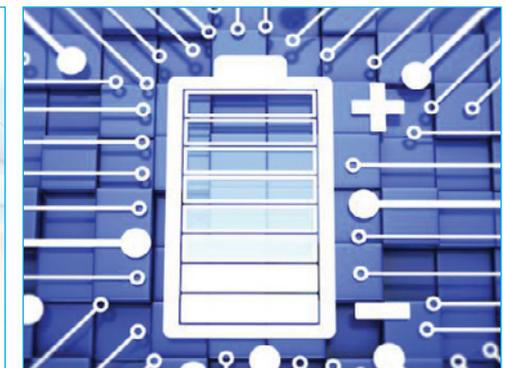

Kevin Mak is an Analyst of the Global Automotive Practice at Strategy Analytics, specialising in the strategic analysis of automotive electronic systems, semiconductors and sensors.

For eleven years, he has been responsible for writing reports on the automotive electronics industry and forecasting global trends for a wide range of clients in light vehicle production and suppliers in Tier 1 electronic systems, sensors and semiconductor components. He has previously worked for Pioneer as a sales analyst and planner for the UK subsidiary's aftermarket in-car entertainment and navigation sales division and also holds an MSc in Information Management and Finance from Westminster University.

Exhibition Plan

AVL INTEGRATION TEST SYSTEMS FOR ELECTRIFICATION

Accelerating xEV development and validation

As of today, integration and validation of electrical HV components is still a very time-consuming procedure. Traditional lab-based testing solutions are not purpose-designed for integration purposes, thus often lack the required flexibility. Much of the integration and validation work is thus still done with prototype vehicles. Using integration test stands, AVL is changing this process for electric drives. The AVL E-Integration Test System allows for the testing and validation of all electrical high-voltage components. In this, the seamless and open AVL tool chain supports in ultimately increasing functionality and reliability throughout all xEV development tasks.

HIGHLIGHTS AT A GLANCE:

- Simplified integration testing
- 50% reduction in testing time which translates into a reduction in overall development time
- HV validation as early as possible in testing time or even parallel to product development
- Full access to AVL methodology approach and experts for xEV development

VISIT US ON STAND

A1

RETSCH is the leading solution provider for neutral-to-analysis sample preparation and characterization of solids.

Based on a century of experience RETSCH develops size reduction and sieving equipment which is characterized by excellent performance, operating convenience, safety and longevity.

Power Capacitors Ltd is Power Factor Correction, having specialised in power quality since 1973. Our experience is as diverse as our customer base which includes multi-national manufacturing, financial and utility companies to SMEs and private individuals. For a consultation or a full survey and specification we are happy to support customers old and new.

Power Capacitors Ltd is an established leader in the specification, design and manufacture of Power Factor Correction systems, committed to delivering the right solution for every application. Our team of highly trained and experienced engineers will properly identify the rating and design of equipment required in every case.

Our experienced engineers are available throughout the UK providing regular servicing and maintenance to ALL makes of Power Factor Correction equipment, ensuring that optimum operation is maintained, maximising the financial and technical benefits.

Denchi Group are a leading UK designer and manufacturer of Lithium-ion based battery systems for power and energy applications. Supplying a diverse customer base spanning the defence, aerospace, marine and mining markets, the applications for their battery products demand the highest levels of performance and reliability.

Having built a reputation for delivering a range of rugged and dependable products for the land battlespace, they have been designing specialist batteries, battery management systems and chargers at their purpose built Scottish facility for over 15 years. Continually innovating, more recently they have extended their capabilities to the market for energy storage systems.

The Advanced Propulsion Centre (APC) is a £1 billion, 10-year programme to position the UK as a global centre of excellence for low carbon powertrain development and production. It was formed in 2013 in a joint commitment by government and the automotive industry, through the Automotive Council, and aims to save 50 million tonnes CO2 by 2023.

APC facilitates partnerships between those who have good ideas and those who can bring them to market. The services provided by the APC enable projects which provide profitable growth and sustainable opportunities for the partners involved. Each programme enhances the UK's position as a propulsion nation and contributes to the country's economic prosperity.

So far, APC has launched and awarded eight funding competitions to more than 130 organisations, with investment totalling £589 million. The awarded projects have safeguarded more than 20,500 automotive supply chain jobs and saved 34 million tonnes CO2 – the equivalent of taking 1.5 million cars off the road.

Fullbrook Systems specialise in the measurement and processing of liquid systems in chemical, pharmaceutical, printing and coating. Of particular interest to companies working with lithium slurries in the development of battery technology is the DISPERMAT range of dispersion and milling equipment for laboratory research as well as for the production of larger batches. Fullbrook also work closely with Ametek Brookfield and offer viscometers for use in the laboratory and interestingly production use where coating processes are commonly measured and controlled. The Turbiscan is able to determine stability of colloidal systems and provides useful information on particle size, stability and agglomeration.

VMA_Getzmann GmbH are well known for the DISPERMAT® and TORUSMILL® ranges of dispersion and milling equipment. Their adaptable systems are ideally suited to the dispersion of lithium battery slurries which often have poor flow characteristics and are difficult to disperse. High speed dissolvers, horizontal bead mills and high shear rotor stator systems are all in use in battery development. Container wall scrapers and double jacketed containers for cooling are standard options within the DISPERMAT® range. The company has a well equipped applications laboratory and works closely with customers who visit to find the best solution for their dispersion projects.

Drive systems for electric vehicles require new Li-ion battery technologies and reliable, inexpensive manufacturing approaches.

Joining of these battery cells presents challenges such as welding of highly conductive, dissimilar materials, multiple-sheets-joining, and varying material thickness combinations. Different cell types and pack configurations also influence joining methods.

Our blue fibre-coupled laser module emits in the blue spectrum at 450 nm. This new technology offers advantages over legacy IR lasers thanks to high absorption at blue wavelengths. Improving welding speed and broadening the process window directly translates into faster production times.

Thermal Hazard Technology (THT) is one of the leading suppliers of lithium battery safety testing equipment. Their Accelerating Rate Calorimeter (ARC) provides an adiabatic testing environment typically leading to full thermal runaway. Isothermal Battery Calorimeters (IBC) for high precision heat measurement and heat capacity are also available.

Compound Semiconductor Applications

Catapults put technology to work to tackle issues and take advantage of opportunities presented to the UK. The CSA Catapult helps UK companies, particularly SME's, to grow by exploiting advancements in compound semiconductor technologies which translate into opportunities for:
Power electronics e.g. smart grid, electric vehicle powertrain
RF/microwave e.g. RADAR, wi-fi and 5G
Photonics e.g. security scanning, health diagnostics and high speed communications

The CSA Catapult will provide world-class research facilities with access to independent, trusted expertise to develop capabilities in the above and accelerate the commercialisation of compound semiconductors in key application areas such as healthcare, the digital economy, energy, transport, defence and security, and space.
